Heavy-Duty VESA Monitor Mount – Fully Adjustable in All Directions

This robust VESA monitor mount is designed to be highly durable and fully adjustable in every direction. The mount is secured using **M6 screws (70mm in length)**, ensuring a strong and reliable hold. To achieve maximum durability and strength, all parts should be 3D printed using **PETG or ABS** filament, with a **wall thickness of 3-5 layers** and an **infill density of 40-70%**. With these specifications, the mount will be as sturdy as a commercially purchased one. In my personal experience, there's absolutely no wobble or instability.

The design allows the arms of the mount to be **infinitely extended** by connecting additional segments, making it customizable to any length you desire. This flexibility enables the mount to be adapted for different setups or configurations depending on the user's specific needs.

If you're looking to **extend the arms** further or need a **pipe adapter** for a custom setup, feel free to **send me a direct message**, and I'll be happy to help!
